Usage requirements

Usage Components

1. Mono Audio Jack Cable x 2

Usage Process

How to Use?

1. Connect the Switch Output module through two 3.5mm Mono Audio jack cables to two adapted devices.

1.1. Switch A

1.2. Switch B

2. Connect to the Access Point (Example: Windows 10 PC)

On Windows 10:

2.1. Select **Start > Settings > Network & Internet > Show available networks**. Select **M5SwitchOutput** network and click on connect. The default network password is **12345678**.

3. M5StackC will display an IP address on its display screen.
4. Open your favourite web browser software.
5. Enter the IP address from step 3 to access switch output control web page.
6. You can now send switch actions by pressing each switch button.

Sleep Mode

The device goes to sleep mode if it's not used for more than one minute and automatically wakes up every 3 minutes.
